DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 22-30, drawn to a method of stabilizing a wound site, classified in class 606, subclass 213.
- II. Claim 1-21 and 39, drawn to apparatus with sheath and guide wires, classified in class 606, subclass 213.
- III. Claims 31-38, drawn to an apparatus with a guide rod, classified in class 606, subclass 213.
- IV. Claims 40-43 and 64-75, drawn to a device having a sheath, wire guides, and a dilating apparatus, classified in class 606, subclass 213.
- V. Claims 44-63, drawn to an apparatus having two sheaths, classified in class 606, subclass 213.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and III, III and IV, II and IV, II and V, III and IV, III and V, and IV and V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as applying a clip for form an anastomosis, in which the sheath is not attached to the wound site. Invention III has separate utility such as applying a suture. Invention IV has separate utility such as dilating an opening in the body. Invention V has separate utility such as introducing fluid into the body. See MPEP § 806.05(d).

Art Unit: 3731

Inventions I and II, I and III, I and IV, and I and V are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case each apparatus can be used for another and materially different process. Invention II can be used to deploy a retention device for form an anastomosis, in which the sheath is not attached to the wound site.

Because these inventions are distinct for the reasons given above and the search required for Groups II, III, IV, and V is not required for Group I, restriction for examination purposes as indicated is proper.

A telephone call was made to Edmund P. Pfleger on September 24, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
